Community That We Are Addressing

- Our team are all gym lovers – so we decided to focus on problems and communities within the gym
- We have realized several problems with the existing gym communities – of which the next slide covers
- In essence, we aim to build a loving and supportive gym community for everyone – and through this process, we aim to build a positive gym experience for all.
 - First community/iteration of our target: UMICH gyms (and our plan for this iteration is known as “MRise”)
 - As college students, time is money: and the gyms are UMICH make gymming very inefficient → and we are here to change this!

Preliminary Data

Why Gym Stats

- Stay healthy (54%),
- Gain strength and endurance (42%),
- Lose weight (41%),
- Meet friends at the gym (25%).

(expertfitness.com)

Millennials

- Millennials use fitness apps more than all other groups
- Women use it twice as much as men

Society's Priorities

People seek sense of community and positive experience over everything
(WellnessCreativity.com)

86% GenZ

Want to start exercising or are exercising

- Projected to continue growing as well!

Preliminary Data + Problems with UMICH Gyms

Current M-Recreational App

- Only has user ID (barcode)
- When classes are offered (but not everyone has access to these classes)
- Gym open hours
- Reserving courts
- Offers personal training – but realistically not many college students will pay for this service

Overall: the app has a lot of buttons but 90% of the buttons does not bring value to the users

PROBLEMS WE'VE IDENTIFIED

Overcrowded

- Gyms reach critical mass fairly quickly
- As a result what little time many have ends up wasted

Inefficient

- Inefficient without a experienced partner
- Inefficient working out with close friends who lack experience

Intimidating

- Joining the gym can be an intimidating process
- Easy to get lost throughout the process (progress doesn't come immediately)
- No one to spot you??!
- Meal plans + beginning workout guides created

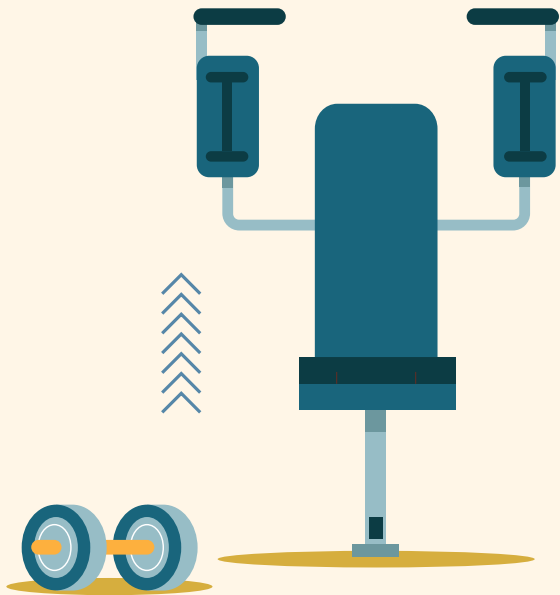

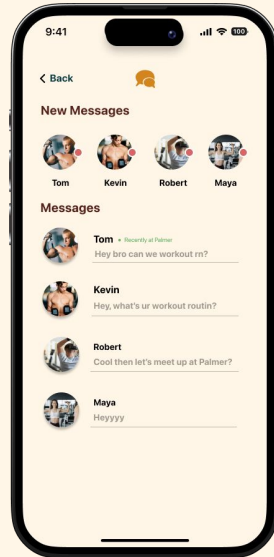

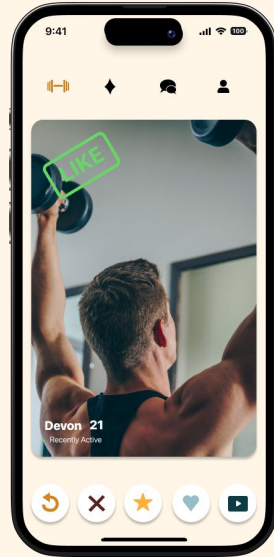

OUR SOLUTION = our app: RISE

An app that gives you everything you need.

1. Gym Partner
2. Gym Availability
3. Gym Guides

Interface

Adhering to UX Heuristics:

- Match between system and real world
- Consistency and standard
- Flexibility and efficiency of use
- Aesthetic and Minimalist design

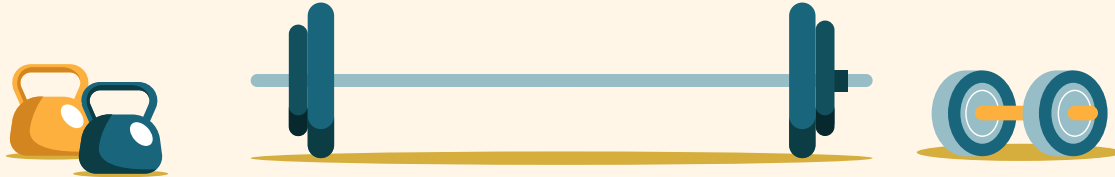

THE FEATURES & Functionality

Match system

- Each user has their own Individual profiles! (Can customize their profile – like any other social media – gender, own bios, username etc)
- Input your workout schedule, workout split,
- Swipe right on someone you like, left on someone you don't.
- Customize + Find someone to workout with you – based off of your workout preferences!

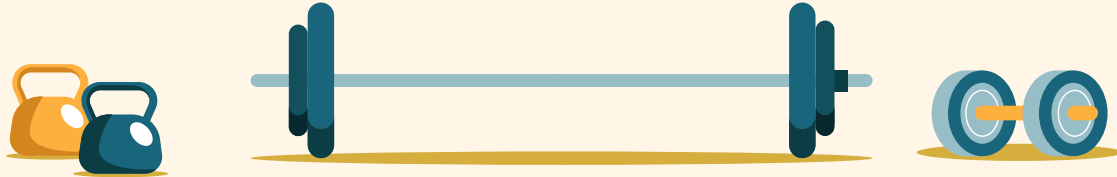

THE FEATURES & Functionality

Traffic System

- Traffic status is presented through a window on the right side of the screen in the gym map window. You can swap between what gym you are viewing.
- This feature on the app will indicate how busy the gym is, what equipments are occupied
 - The information system here will operate based of systems like Yelp where users will indicate which machines are being used through instant reviews

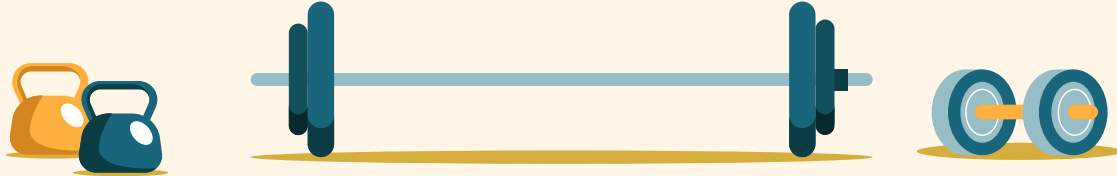

THE FEATURES & Functionality

Socialize + build a community

- Users have a message tab in the app with which they can contact their “matches” to schedule when to meet through a calendar function
- Security measures are in place – we will establish systems similar to LinkedIn where you need to verify your account to register (and one person can only have one account) to prevent scammers
- Meet at the gym – not other places to ensure safety of all users!

Data Collection

- Yelp esque system
- Users can leave comments to indicate how busy the gym is
- Users can also leave reviews on other users i.e beginners can rate their mentors
- Additionally depending on how many times a user is reported / the overall content of a report, the offending user will be banned from the site.

User Information and Analysis

- When registering for an account, we will ask questions about gym habit to help build a database
- Questions regarding their methods of training are asked in order to cultivate proper matches
- Those questions will make it easier to recommend training programs and diet plans for individuals.

Data Storage

- “Favorite” page where users can save the plans/programs they particularly like
- Users can also save the profiles of mentors or beginners they have interacted with
- These favorite pages are invisible to others as to avoid data scraping or mining
- Mentors / sources cannot see if their content is favorited as to avoid any form of hierarchy or user friction

Competitor & their solution

MyFitness Pal

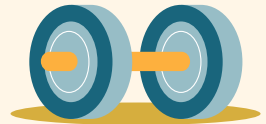

- App with meal prep
- Focuses more on logging workouts and meal plans rather than a guide to lead beginners
- Comes at a high price

Influencers: Pamela Reif & Lily Sabri

- Pamela + Lily → both are fitness influencers with youtube channel + app + social media channels
- They target at home workout more
- To get meal plans, fitness guides → charge money
- Youtube Videos are all individualized → not a complete guide

Why we don't need to worry about our competitors:

- Doesn't foster in person community (they are all online based – we target in person community)
- Doesn't show gym equipment availability
- Target in gym workouts (as opposed to online at home workouts)
